Read this success story to know how Swishfund got a brand new website that is more transparent for their clients and more structured and easy-to-use for their employees. With our system, SwishFund's clients can apply for a loan faster and easier, while SwishFund workers can manage all requests effectively due to processes automation.

About our partner

Swishfund is an international Fintech startup that provides financing to entrepreneurs to grow their business. They give short 3 to 6-month loans to companies that need to borrow money quickly, giving them easy access to flexible financing.

- Founded in 2016
- Headquarters: Bussum, Noord-Holland
- Company size: 11-50 employees

What our partner needed

Swishfund came to HYS Enterprise to develop the project from scratch. The client needed a service where users could apply for a loan and a system for recording and processing these applications.

Methodology and technologies

Methodology: Scrum

Technologies: PHP+MySQL for API, Symfony framework, Angularjs 1.5

What we did

- Developed the first version of the website
- Added integration with ancillary services that facilitate the process of applying for a loan and processing the application
- Released the second version of client interface, which is more transparent to the client, allowing to apply faster
- Released an updated, simplified admin panel, which is more structured and easy-to-use for the company's employees
- Set up processes automation, including automated tasking system for employees

Results and profit for the partner

We developed a service for Swishfund from scratch. The client got a web business with a client interface, admin panel, and automated processes.

During the time of our cooperation, the partner opened an additional trademark of a similar direction and entered the British market.
