Meetups are a great opportunity to talk to your colleagues, discuss common challenges, share new ideas, and learn from each other. That's why on November 1 we're launching HYS Enterprise Tech & Beer Meetups!

Tech cases, fresh ideas, networking with experts, and cool beer. Sounds like the perfect meetup at HYS Enterprise! No long and boring reports — just real-life cases, actionable advice, knowledge sharing, and networking.

Each meeting will be dedicated to a certain technology. The first technology we'll talk about is Java! Our first meeting is planned for November 24.

Topics for the November 24 meetup

Kibana+ElasticSearch+LogStash to handle log messages on prod servers

What is logging and what is it for?

- How can we log totally senselessly?
- Logging levels, or how not to drown in gigs of data
- Most popular logging processors
- Elastic Stack as a result of smoking in the Netherlands
- This beautiful Kibana
- This nimble and ravenous ElasticSearch
- This terrifying LogStash
- LogStash: real-life example (or even a live demo)
- How can we avoid the pitfalls of LogStash?
- ElasticBeats, or "What more do you want from me?"

GitLab for CI/CD processes

- What is CI/CD and when should we configure it?
- GitLab, after all
- Basic concepts
- Settings for your project
- A real-life example

Key takeaways of the event will be coming soon in our blog posts, and photos from the event will be posted on our Facebook page afterward. Stay tuned!
